

Azure Active Directory Lab

Project Overview

This project demonstrates the deployment and configuration of a Windows Server 2022 Domain Controller in Microsoft Azure.

The environment was built to develop hands-on experience with Azure infrastructure, Active Directory Domain Services (AD DS), DNS, and Windows Server administration.

Environment

Azure Resources

- Resource Group: rg-ad-lab
- Virtual Network: vnet-ad-lab
- Subnet: subnet-servers
- Virtual Machine: DC01
- Operating System: Windows Server 2022 Datacenter

Active Directory

- Domain Name: corp.local
- DNS Server Installed
- Active Directory Domain Services Installed
- Domain Controller Promotion Completed

Skills Demonstrated

- Azure Resource Group deployment
- Azure Virtual Network configuration
- Windows Server administration
- Active Directory deployment
- DNS configuration
- User and Group management
- Cloud infrastructure management

Project Steps

1. Created Azure Resource Group
2. Created Virtual Network and Subnet
3. Deployed Windows Server 2022 VM
4. Installed AD DS and DNS roles
5. Promoted server to Domain Controller

6. Created Active Directory domain
7. Verified Active Directory functionality

Screenshots

See Attached

Lessons Learned

- Understanding Azure networking fundamentals
- Installing and configuring Active Directory
- Configuring DNS for domain services
- Managing Windows Server roles
- Deploying infrastructure in Azure
